

# JOINTcare Tablets & JOINTcare Gel

## Description

Movement in the body is a functional combination of bone joints, ligaments, tendons and synovial fluid.

Due to metabolic, physiological and functional reasons any defects in these parts of the body may lead to inflammatory conditions of the joints.

Arthritis is one of the disorders of movable bone joints and muscles. Starting with the hands it progressively affects all the joints resulting in inflammation, pain, stiffness, damage to cartilage, immobility etc.

Ankylosing Spondylitis is a severe form of arthritis affecting the lower back and sometimes hip joints and is generally seen in elderly people. Cervical Spondylitis is more common in young adults. Joint care is especially formulated to provide a long lasting relief in arthritis and inflammatory conditions of joints. It reduces RA factors, ESR and minimise cartilage destruction by modifying the disease pattern. Unlike modern medication such as NSAIDS it does not produce gastric irritation and can be safely used without any side effects.

## Composition Tablets

Boswellia Serrata	300mg
Plunchea Lanceolata	200mg

## Action and Benefits

- Proven analgesic anti-inflammatory action.
- Immune modulation action.
- Reduces RA Factor and ESR.
